About Jaipur Flexi Exports

Engineering Excellence in Flexible Packaging

Located in the historic and strategic industrial hub of **Jaipur, India**, Jaipur Flexi Exports is a premier manufacturer and exporter of high-performance flexible packaging.

We specialize in multi-layer laminates designed to protect, preserve, and promote your products across the globe.

From our central location, we leverage India's world-class logistics network—including direct connectivity to major sea ports—to provide seamless export solutions to the MENA region, Europe, and beyond.

Founder's Message

"Precision in every micron, trust in every shipment."

As an **Engineer with an MBA in Marketing**, my approach to packaging has always been rooted in technical integrity. Before founding Jaipur Flexi Exports, I spent over a decade at the heart of the industry as a specialized dealer for **Toyo Inks** and **Brilliant Adhesives**. This deep-rooted experience gave me a unique "inside-out" understanding of packaging chemistry. I don't just see a pouch; I see the bond strength of the adhesives and the surface tension of the inks. I understand how these elements interact to ensure your product remains fresh, your branding remains vibrant, and your laminates never fail in the field. At Jaipur Flexi Exports, we combine this technical "know-how" with a commitment to global standards. We aren't just your supplier; we are your technical partners in growth.

JAIPUR FLEXI EXPORTS

Investing Packaging For Global Trade

Product Category I: High-Barrier Foil Laminates

The Gold Standard for Maximum Preservation

Available Pouch Style

- Stand-up Pouch (Doypack) with Zipper
- Three-Side Seal (3SS) for Sachets
- Side Gusseted Bags (Brick Pack)
- Center Seal Pouches

Technical Specification Table

Material Structure	PET / ALU / PE or PET / MET-PET / PE (High Micron)
Thickness Range	60 Microns to 150 Microns
Barrier Properties	Near-zero Oxygen (OTR) and Moisture (WVTR) transmission
Print Technology	Up to 9-Color High-Definition Rotogravure
Surface Finish	High Gloss, Matte, or Registered Matte/Gloss

Key Performance Advantages

- Total Light Blockage
- Superior Seal Integrity
- Puncture Resistance
- Aroma Retention

Founder's Insight

Having worked extensively with Toyo Inks, we ensure that the metallic adhesion on these foils is tested for zero-lamination peel, even when packed with aggressive spices or chemical-based powders.

Ideal Applications

- ☪ Spices
- ☒ Tea Nutraceuticals
- ☒ Dry Fruit Pouch Styles

Product Category II: Performance Metalized Structures

The Perfect Balance of Aesthetics & Barrier Protection

Founder's Insight

Through my experience with Brilliant Adhesives, we focus heavily on 'Metal Transfer' resistance. We ensure the metal layer bond is so strong that it doesn't delaminate even under the stress of high-speed filling or pressure changes during air-cargo transport.

Technical Specification Table

Material Structure	PET / MET-PET / PE or BOPP / MET-BOPP / PE
Thickness Range	40 Microns to 120 Microns
Appearance	Mirror-finish Metallic (Inside) with Vibrant Exterior Print
Print Technology	Surface or Reverse Printing for long-lasting gloss
Lamination	Solvent-less using Brilliant adhesives

Key Performance Advantages

- **High Visual Appeal:** The reflective interior surface enhances the "premium" feel of the brand when the consumer opens the pack.
- **Moisture & UV Shield:** Significantly reduces water vapor transmission (WVTR) to keep crispy items fresh.
- **Cost Efficiency:** Offers a 20-30% weight reduction compared to foil laminates, leading to lower shipping costs.
- **Optimized Slip Properties:** Tailored for high-speed Filing & Sealing (VFFS/HFFS) machines to increase your production throughput.

Ideal Applications

- Snack Foods: Potato chips, namkeen, and extruded snacks.
- Confectionery: Chocolates, hard candies, and gummies.
- Bakery Products: Cookies and biscuits.
- Sachets: Single-use shampoo, ketchup, or detergent samples.

Available Pouch Styles

- Center Seal (Pillow) Pouches
- 3-Side Seal Sachets
- Stand-up Pouches with Tear Notches
- Continuous Rolls for Automatic Packaging Lines

Product Category III: Industrial & Home Care (Heavy Duty)

Engineered for Strength, Built for Reliability

Technical Specification Table

Material Structure	PET / PE (Heavy Gauge) or PET / NYLON / PE
Thickness Range	80 Microns to 250 Microns
Seal Strength	High-Integrity Welded Seals for liquid/powder retention
Special Properties	ESCR (Environmental Stress Crack Resistance)
Customization	Side-gussets, Heavy-duty Handles, D-cuts

Key Performance Advantages

- **Superior Puncture Resistance:** Formulated with high-strength LDPE/LLDPE blends to prevent sharp grains or industrial powders from piercing the film.
- **Chemical Compatibility:** Using specialized **Brilliant Adhesives** that are resistant to the surfactants and aggressive chemicals found in liquid soaps and detergents.
- **Burst-Proof Engineering:** Reinforced seal layers designed to survive drops and vertical stacking in warehouses.
- **Large Format Capability:** Ideal for bulk quantities ranging from 500g to 10kg.

Ideal Applications

Home Care: Laundry detergents (liquid & powder), floor cleaners, and dishwashing bars.

Agriculture: Seeds, fertilizers, and pesticides.

Bulk Food: Grains, pulses, rice, and flour (Atta).

Industrial: Construction chemicals, grout, and adhesives.

Available Pouch Styles

Heavy-Duty Center Seal Pouches (Best for grains/powders)

3-Side Seal Sachets (Best for shampoo and liquid detergents)

Side-Gusseted Bags (Best for large volume storage)

Pouch with Built-in Handle (For consumer convenience)

Founder's Insight

In heavy-duty packaging, the 'Seal-Through-Contamination' factor is critical. My background in adhesive chemistry ensures that even if powder or liquid dust gets into the seal area during filling, our pouches maintain a hermetic bond that prevents bursting during transit.

Technical Customization & Export Readiness

Precision Manufacturing, Seamless Global Delivery

The Customization Suite

Precision Colour Management

- 9 Colour high speed roto printing with Toyo inks

Functional Add-ons

- Premium zippers and sliders
- D-cut handles & round corners

Surface Aesthetics

- High-Gloss
- Soft-Touch Matte
- Registered Spot-UV finishes

Export Logistics Excellence

Strategic Proximity

MENA Region Specialists

Secure Packaging for Sea Freight

Compliance & Quality Assurance

Bond Strength

Seal Integrity

Food Safety

Founder's Insight

Having managed large-scale supply chains for ink and adhesive distribution, I personally oversee our QC protocols. We don't just ship products; we ship peace of mind by ensuring our COA (Certificate of Analysis) matches your exact machine specifications.
